Northrop Grumman Mission Systems Provides Elevator Pitch Workshop to SDSU Students

31 students from San Diego State University (SDSU) participated in an elevator pitch workshop with Northrop Grumman Mission Systems engineers and managers on September 27, 2019. The workshop was hosted by SDSU's Career Services and MESA program.

The elevator pitch workshop targeted undergraduate and graduate students majoring in electrical engineering, computer engineering, and computer science. Students were able to have their resume and elevator pitches critiqued, as well as learn of various career opportunities available at Northrop Grumman.

Northrop Grumman Software Engineer and SDSU alumnus Leon Tran welcomes students to the workshop.

“There are many advantages of having an effective elevator pitch workshop for both the students and companies,” said Northrop Grumman Mission Systems Software Engineer and SDSU alumnus Leon Tran. “Students get a confidence boost from the practice whilst companies can market themselves, help students better prepare, and get in touch with potential interns or new grads.”

MESA is one of the largest programs in the state to support educationally disadvantaged students so they can graduate from college with science, technology, engineering, and math (STEM) degrees. MESA provides academic support and enrichment to more than 18,000 K-12 students and more than 7,800 community college and 4-year college students each year. For more information, visit mep.sdsu.edu.

Northrop Grumman is a leading global security company providing innovative systems, products and solutions in autonomous systems, cyber, C4ISR, space, strike, and logistics and modernization to customers worldwide.
